S.B. JAIN INSTITUTE OF TECHNOLOGY MANAGEMENT & RESEARCH, NAGPUR

Practical 03

Aim: Automate student marksheet generation, system information display, Fibonacci and prime number generation, and file management operations using shell scripts to enhance computational efficiency and user interaction.

Name: Manish Wanjari

USN: CM24018

Semester / Year: IV/II

Academic Session: **2025-26**

DateofPerformance:

Date of Submission:

⏺ **Aim:** Automate student marksheet generation, system information display, Fibonacci and prime number generation, and file management operations using shell scripts to enhance computational efficiency and user interaction.

⏺ **Tasks to be done in this Practical.**

a) Write a shell script to generate mark- sheet of a student. Take 3 subjects,calculate and display total marks, percentage and Class obtained by the student.

b) Write a menu driven shell script which will print the following menu andexecute the given task.

⏺ Display calendar of current month.

⏺ Display today's date and time.

⏺ Display usernames those are currently logged in the system.

⏺ Display your terminal number

c) Write a shell script which will generate first n Fibonacci numbers like: 1, 1, 2, 3, 5, 13

d) Write a shell script which will accept a number b and display first n primenumbers as output.

e) Write menu driven program for file handling activity⏺ Creation of file.

⏺ Write content in the file. ⏺ Upend file content.

⏺ Delete file content

⏺ **Objectives:**

1. Automate marksheet generation with total, percentage, and classclassification.
2. Develop menu-driven scripts for system information and file operations.
3. Generate Fibonacci and prime numbers for user-defined inputs.

⏺ **Requirements:**

⏺ **Hardware Requirements:**

⏺ Processor: Minimum 1 GHz

⏺RAM: 512 MB or higher ⏺Storage: 100 MB free space

⏺ **Software Requirements:**

⏺ Operating System: Linux/Unix-based

⏺ Shell: Bash 4.0 or higher

⏺ Text Editor: Nano, Vim, or any preferred editor

🔲 **Theory:**

Shell scripting is a powerful way to automate repetitive tasks and manage system operations efficiently. It allows users to write programs using shell commands and scripting constructs. Shell scripts are interpreted line-by-line by a shell interpreter, making them ideal for administrative tasks, file management, and system automation. This practical encompasses a variety of real-world scenarios that demonstrate the utility of shell scripting for computing tasks and resource management.

1. Marksheet Generation

This script takes input marks for three subjects, calculates the total marks, percentage, and determines the class of the student based on predefined conditions. Conditional statements (if-else) are used to classify the performance into distinction, first class, second class, or fail. This exercise emphasizes the use of arithmetic operations and decision-making constructs.

Key concepts include:
- 🔲 Reading user input using read
- 🔲 Arithmetic operations with $((expression))
- 🔲 Conditional statements for decision-making

2. Menu-Driven Script for System Information

Menu-driven scripts enhance user interaction by presenting a list of options for performing different tasks. In this practical, options are provided to display the calendar of the current month, the current date and time, logged-in users, and the terminal number. The script utilizes looping constructs (while) and case statements for structured flow control.

Commands used:
- 🔲 cal for displaying the calendar
- 🔲 date for showing current date and time
- 🔲 who to list logged-in users
- 🔲 tty to identify the terminal

3. Fibonacci Number Generation

Fibonacci numbers are a sequence where each term is the sum of the two preceding ones. The script uses iterative constructs (for loop) to generate n terms based on user input. This practical illustrates the use of loop control and variable swapping to generate series data efficiently.

4. Prime Number Display

This script accepts an integer n and outputs the first n prime numbers. A nested loop checks divisibility to determine if a number is prime. The practical demonstrates logic building for number-theoretic operations using loops and conditionals.
5. Menu-Driven File Management

The file handling script enables users to create, write, append, and delete file content. The case construct manages different file operations.
Commands include:

- touch to create files
- cat for writing and appending content
- rm for deleting files

This exercise emphasizes text manipulation, input handling, and file control mechanisms in Unix-like environments.
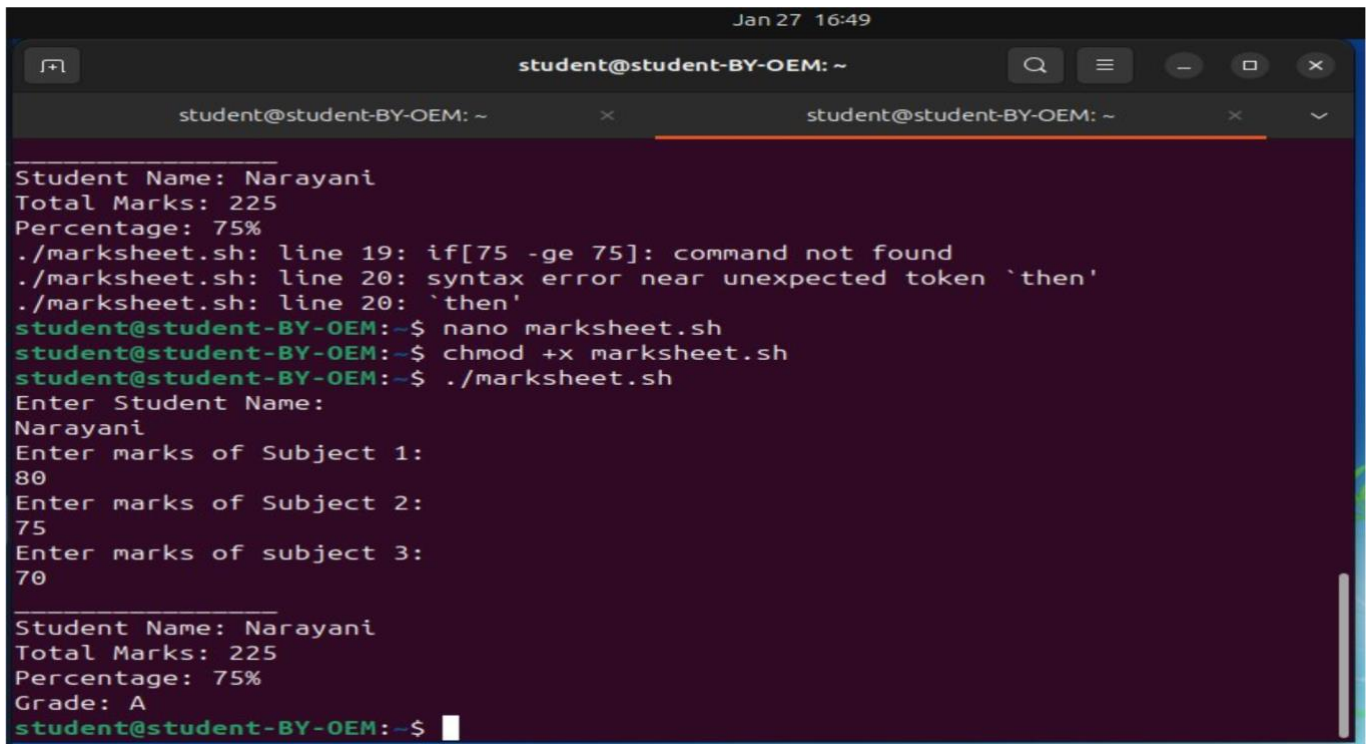

⊕ Diagrammatical View of Shell

⍰ **CODES**

1. Write a shell script to generate mark- sheet of a student. Take 3 subjects, calculate and display total marks, percentage and Class obtained by the student.

Output1:

```
read name
echo "Enter marks of Subject 1:"
read m1
echo "Enter marks of Subject 2:"
read m2
echo "Enter marks of subject 3:"
read m3
total=$((m1+m2+m3))
percentage=$((total/3))
echo "_____"
echo "Student Name: $name"
echo "Total Marks: $total"
echo "Percentage: $percentage%"
if [ $percentage -ge 75 ]
then
    echo "Grade: A"
elif [ $percentage -ge 60 ]
then
    echo "Grade: B"
elif [ $percentage -ge 40 ]
then
    echo "Grade: C"
else
    echo "Grade: Fail"
fi
```

```
_____
Student Name: Narayani
Total Marks: 225
Percentage: 75%
./marksheet.sh: line 19: if[75 -ge 75]: command not found
./marksheet.sh: line 20: syntax error near unexpected token `then'
./marksheet.sh: line 20: `then'
student@student-BY-OEM:~$ nano marksheet.sh
student@student-BY-OEM:~$ chmod +x marksheet.sh
student@student-BY-OEM:~$ ./marksheet.sh
Enter Student Name:
Narayani
Enter marks of Subject 1:
80
Enter marks of Subject 2:
75
Enter marks of subject 3:
70

_____
Student Name: Narayani
Total Marks: 225
Percentage: 75%
Grade: A
student@student-BY-OEM:~$
```

2. Write a menu driven shell script which will print the following menu and execute the given task.

⬚ **Display calendar of current month.**

⬚ **Display today's date and time.**

⬚ **Display usernames those are currently logged in the system.**

⬚ **Display your terminal number**

```
  GNU nano 7.2                              ex2.sh
echo "===============Menu Program================"
echo "1. Display Current Date"
echo "2. Display Cureent Directory"
echo "3. List Files in Directory"
echo "4. Exit"
echo "=========================================="
echo ""
echo "Enter your Choice:"
read choice

case $choice in
1) echo "Current Date and Time:"
date;;
2) echo "Current Directory:"
pwd;;
3) echo "Files in Directory:"
ls;;
4) echo "Existing program..."
exit;;
*) echo "Invalid choice"
;;
esac
```

```
student@student-BY-OEM:~$ ./ex2.sh
===============Menu Program================
1. Display Current Date
2. Display Cureent Directory
3. List Files in Directory
4. Exit
==========================================

Enter your Choice:
3
Files in Directory:
demo.sh  Documents  ex1.sh  Music     Public   Templates
Desktop  Downloads  ex2.sh  Pictures  snap     Videos
student@student-BY-OEM:~$
```

3. Write a shell script which will generate first n Fibonacci numbers like:
1, 1, 2, 3, 5, 1

```
1 2 3 4 5
Fibonacci Series:
./fibonacci.sh: line 6: ((: 1 2 3 4 5: syntax error in expression (error token is "2 3 4 5")

student@student-BY-OEM:~$ ^C
student@student-BY-OEM:~$ nano fibonacci.sh
student@student-BY-OEM:~$ chmod +x fibonacci.sh
student@student-BY-OEM:~$ ./fibonacci.sh
Enter number of terms:
6
Fibonacci Series:
1 1 2358
student@student-BY-OEM:~$ nano fibonacci.sh
student@student-BY-OEM:~$ chmod +x fibonacci.ch
chmod: cannot access 'fibonacci.ch': No such file or directory
student@student-BY-OEM:~$ chmod +x fibonacci.sh
student@student-BY-OEM:~$ ./fibonacci.sh
Enter number of terms:
6
Fibonacci Series:
1 1 2 3 5 8
student@student-BY-OEM:~$ nano fibonacci.sh
student@student-BY-OEM:~$ chmod +x fibonacci.sh
student@student-BY-OEM:~$ ./fibonacci.sh
Enter number of terms:
6
Fibonacci Series:
```

```
  GNU nano 7.2                          fibonacci.sh
echo "Enter number of terms:"
read n

a=1
b=1
echo "Fibonacci Series:"

for (( i=1; i<=n; i++ ))
do
  echo -n "$a "
  c=$((a + b))
  a=$b
  b=$c
done

echo ""

                              [ Read 17 lines ]
```
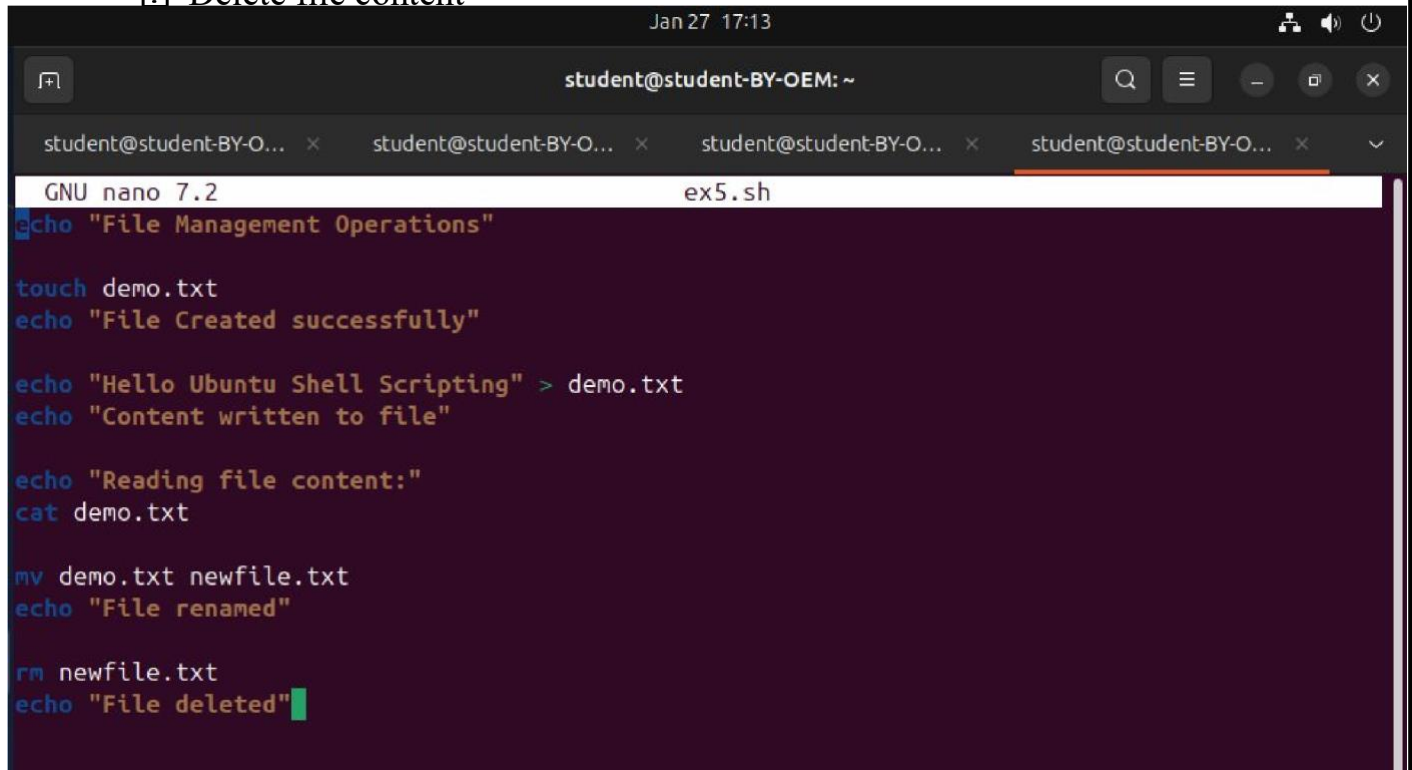

4. Write a shell script which
will accept a number b and display first n prime numbers as output.

```
 GNU nano 7.2                        ex4.sh
echo "Enter value of n:"
read n
count=0
num=2
echo "First $n prime numbers are:"
while [ $count -lt $n ]
do
flag=1
for (( i=2; i<=num/2; i++ ))
do
if [ $((num % i)) -eq 0 ];
then flag=0
break
fi
done
if [ $flag -eq 1 ]; then echo -n "$num "
count=$((count + 1))
fi
num=$((num + 1))
done
echo ""
```

```
Enter value of n:
9
First 9 prime numbers are:
2 3 5 7 11 13 17 19 23
student@student-BY-OEM:~$
```

5. Write menu driven program for file handling activity
   - ☐ Creation of file.
   - ☐ Write content in the file.
   - ☐ Upend file content.
   - ☐ Delete file content

Jan 27 17:13

student@student-BY-OEM: ~

student@student-BY-O... ×   student@student-BY-O... ×   student@student-BY-O... ×   student@student-BY-O... ×

```
GNU nano 7.2                          ex5.sh
echo "File Management Operations"

touch demo.txt
echo "File Created successfully"

echo "Hello Ubuntu Shell Scripting" > demo.txt
echo "Content written to file"

echo "Reading file content:"
cat demo.txt

mv demo.txt newfile.txt
echo "File renamed"

rm newfile.txt
echo "File deleted"
```
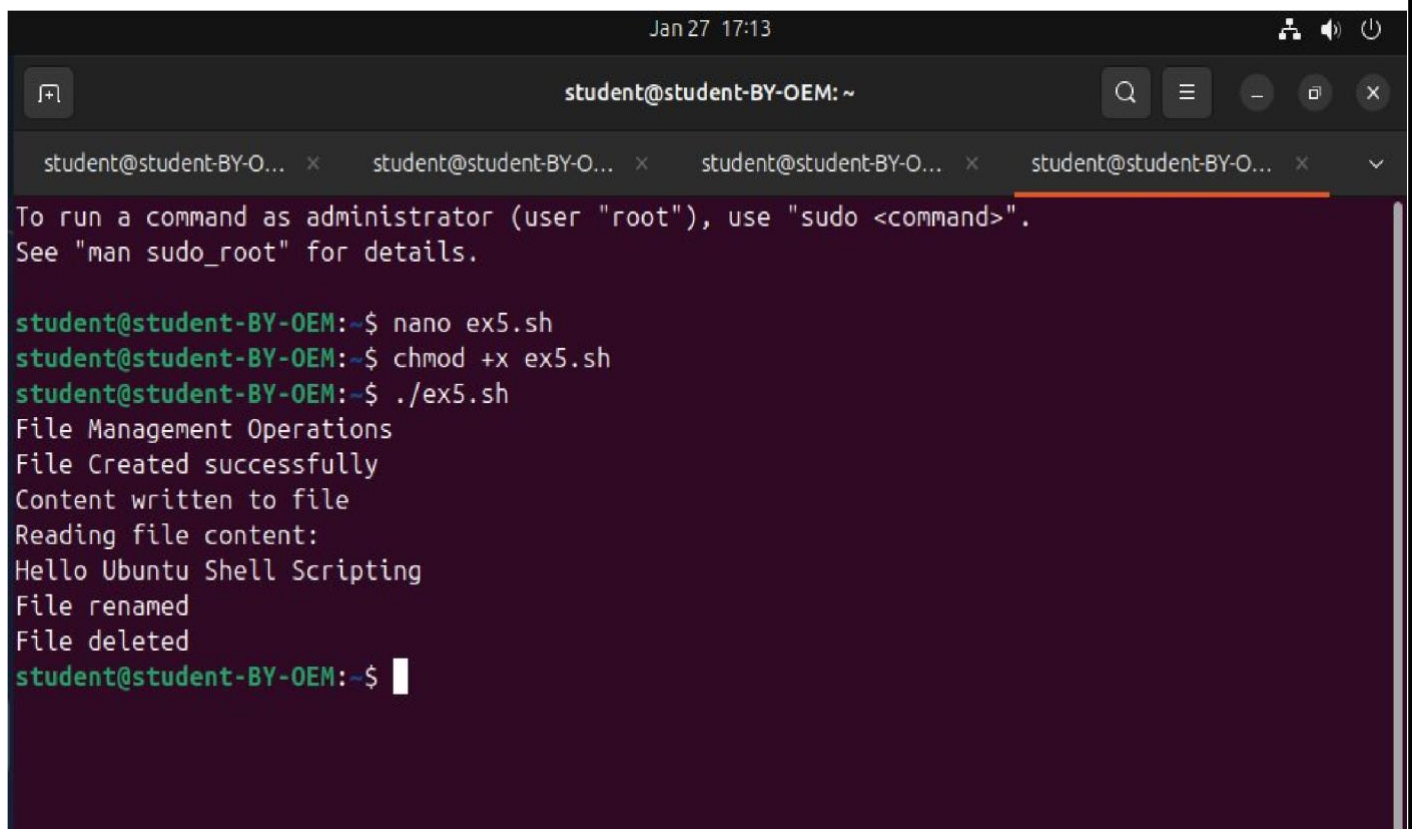

Jan 27 17:13

student@student-BY-OEM: ~

student@student-BY-O... ×   student@student-BY-O... ×   student@student-BY-O... ×   student@student-BY-O... ×

```
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

student@student-BY-OEM:~$ nano ex5.sh
student@student-BY-OEM:~$ chmod +x ex5.sh
student@student-BY-OEM:~$ ./ex5.sh
File Management Operations
File Created successfully
Content written to file
Reading file content:
Hello Ubuntu Shell Scripting
File renamed
File deleted
student@student-BY-OEM:~$
```

⮚ **Conclusion**: In this practical, we conclude that shell scripting efficiently automates tasks like marksheet generation, system information display, number computations, and file management, enhancing system operations and user interaction through command-line utilities.

⮚ **Discussion Questions:**

1. **What is the purpose of using shell scripting in this practical?**
2. **Which command is used to display the current date and time?**
3. **How does the script calculate the Fibonacci sequence?**
4. **Which command is used to create a file in the file management script?**
5. **How does the prime number script determine if a number is prime?**
